INVOICE NO.

Sales Invoicing

The e5 Sales Invoicing application provides powerful and flexible methods of invoice generation ranging from manual to automated billing. Seamless integration with complimentary e5 applications such as general ledger, accounts receivable and job billing eliminate duplication of data and tiresome manual interfaces that are otherwise necessary to keep data in step.

Support for contract related, job related and internal inter-departmental billing means that the solution provides a business enabling framework, able to support changing business practice with ease. Flexible document controls, invoice templates, user defined data fields and item or ad-hoc bills, mean that all customer information requirements are met from a single solution.

Enhanced productivity

Productivity is enhanced through the shorter time required to generate, transmit, enquire, and report on transactions. Sales invoicing contributes to an efficient sales cycle providing a single repository geared to efficient billing. Flexible contract and job billing capabilities allow easy and efficient generation of periodic and recurring invoices. In addition, output management facilities allow invoices to be centrally or locally distributed as required, including options to generate xml output, potentially eliminating re-keying of invoice data for your customer.

Reduce the cost of billing

Pre-definition of billing details for all types of income, including templates that can record varying degrees of detail, mean that even manual billing is efficient across all departments that need to generate invoices.

Invoice generation can include optional instalment arrangements and integration with the e5 direct debit mandate solution mean that arrangements for the payment plan can be set even as the bill is raised.

Extensive defaulting of information, including the use of a comprehensive item file, reduce errors, ensure easy compliance with corporate standards for tax and other coding as well as imposing standard pricing where required.

Contract compliance can be enforced, and a shared customer database improves corporate communications within the organisation. Accurate and flexible transaction level options allows you to provide more meaningful bills to customers reducing the potential for delay brought about by queries from business partners prior to the completion of a transaction.

Business Benefits:

- Accurate and timely billing
- Reduced costs through enhanced productivity
- Solution supports all departmental needs
- Improved customer serviceduplication of supplier accounts

Features:

- efficient and extensible invoice generation
- easy to generate, transmit and enquire on transactions
- comprehensive, accurate transaction documentation
- integrated with receivables management, including automated instalment and direct debit collection
- optional interfacing from order processing system
- credit exposure accurately assessed to reduce risk
- better customer service including optional xml output
- flexible pricing models, with links to e5 inventory management
- comprehensive contract management and integration with e5 job billing

Billing flexibility

Billing requirements and schedules can vary widely by customer or transaction. Customers may require output transmission by varying methods including: mail, electronic transfer, web, and in varying formats.

The e5 sales invoicing solution enables output and transmission to be tailored to individual customer requirements with optional links and exploitation of features available within e5 electronic document management.

Technology platforms

The e5 solution exploits multi-platform technology running on leading databases such as DB2, Oracle and SQL server.

Thin client technology means that all of the application is accessible from a suitable machine equipped with a browser and the java run time executable.

Summary

The e5 sales invoicing system equips your organisation with an infrastructure to support the unknown challenges of tomorrow.

It provides highly efficient invoice generation facilities enabling rapid customer billing, timely update to accounts receivable and therefore the earliest possible recovery of debt.

Eclipse and e5

Delivering intelligent solutions with old-fashioned service

e5's multi cross platform engineering technology coupled with leading edge Java frameworks running on databases such as DB2, Oracle and SQL server, has resulted in a robust, scalable open architecture. Thin client technology means that all of the application is accessible from a suitable machine equipped with a browser and the java run time executable.

e5 is owned and implemented by Eclipse. At Eclipse our philosophy is simple. We deliver the right solution with the highest levels of service. This is part of our 'client for life philosophy'. Once your solution is implemented, we maintain a strong on-going business relationship, with 24 x 7 support and a range of value – added services to ensure your e5 solution is remains reliable and effective in your business.
